

# Web Project

## Content:

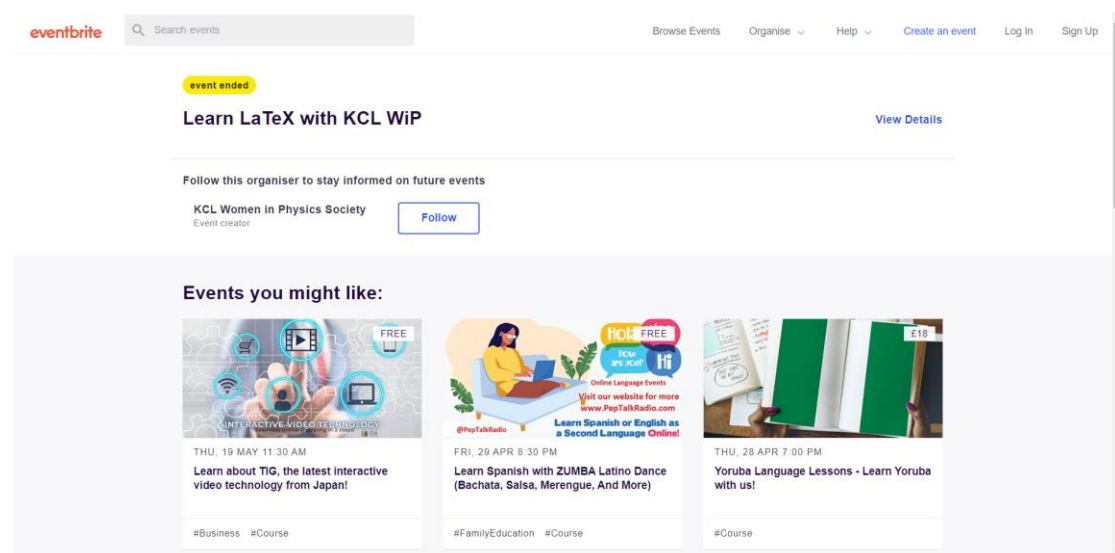

This project is about social event planning system.

## Research:

Target website:

link: [https://www.eventbrite.co.uk/e/learn-latex-with-kcl-wip-tickets-](https://www.eventbrite.co.uk/e/learn-latex-with-kcl-wip-tickets-249851822527?aff=ebdsoporgprofile)

[249851822527?aff=ebdsoporgprofile](https://www.eventbrite.co.uk/e/learn-latex-with-kcl-wip-tickets-249851822527?aff=ebdsoporgprofile)

This is the first page of this website which is simplism.

Roughly, there are three parts

1. A screenshot of the Eventbrite website showing the 'Learn LaTeX with KCL WiP' event page. The page includes a search bar, navigation links, and a list of recommended events.
2. A screenshot of the Eventbrite website showing the 'Learn LaTeX with KCL WiP' event page. The page includes a search bar, navigation links, and a list of recommended events.

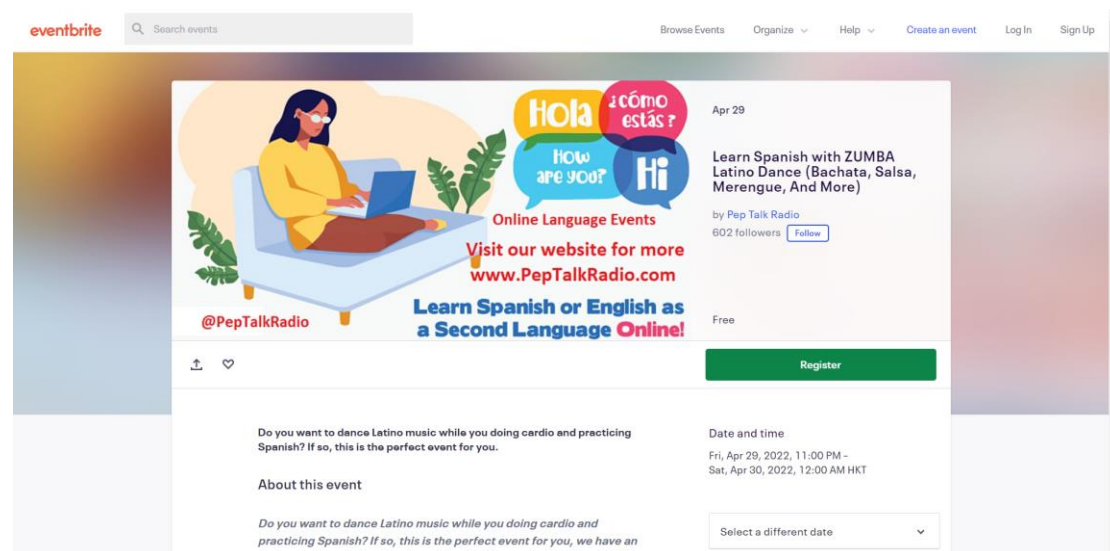

3.

The first part which include search input, log in or out; and some details about “eventbrite”

Second part is the event which you want to join in

The last part is recommendation module. If visitors are interested in any part, just click the one they want to know.

There is the second page when click an event.

No doubt, the top part is still there. In the main part, there is a sightly and colorful picture which indicate the primary event---Learn Spanish.

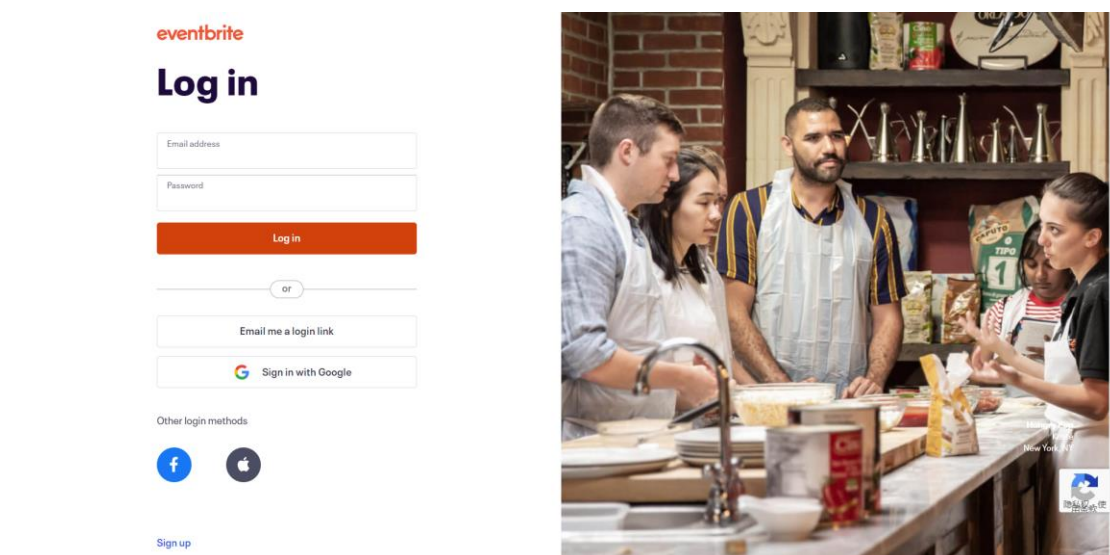

On the right of this picture is the title of this event. Which involves the author name link and follow button.

The next level is share event, like event and register button. There feature is the basic for visitor. Also, in the project, the share event is a good example for achieve the requirement of

“Generate a link for people without account”.

“About this event”: the content of this event. Although this is just the describe of this social event, it is necessary for visiting.

On the right side: when visitor select a date, the page will update automatically in the “Date and time”. Connecting to this project, this part can show the time when everyone is available for an event.

This is the log in page which is log by email and several ways to log in.

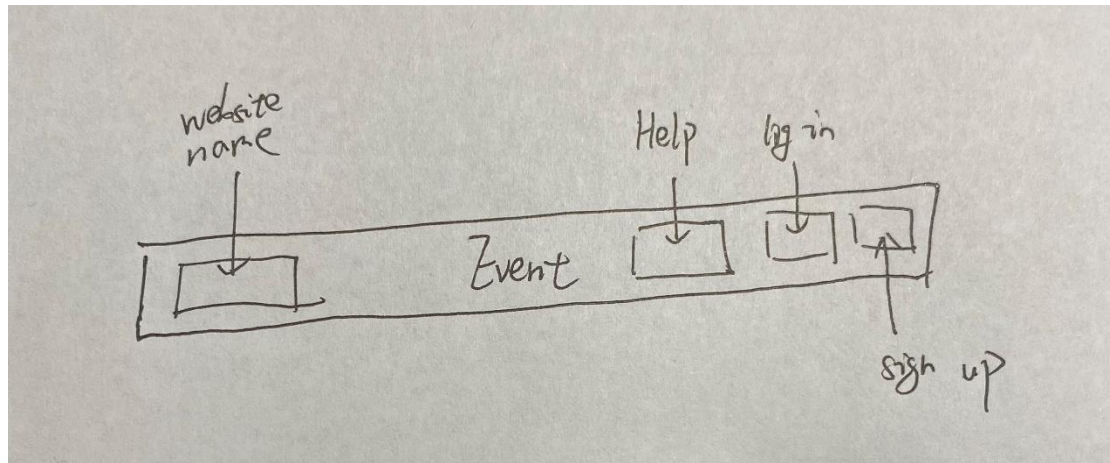

Same as usual.

However, there is an unusual function is if you click “Email me a login link”. There is a pop-up window. Visitor can input their email address to send login link.

Header and footer:

This is the basic design of header.

The names with arrow are link.

Website name can lead people go back to the first page.

Help can provide the detail of this website or find ticket (which indicate what event you already followed)

Log in can pop to the log page

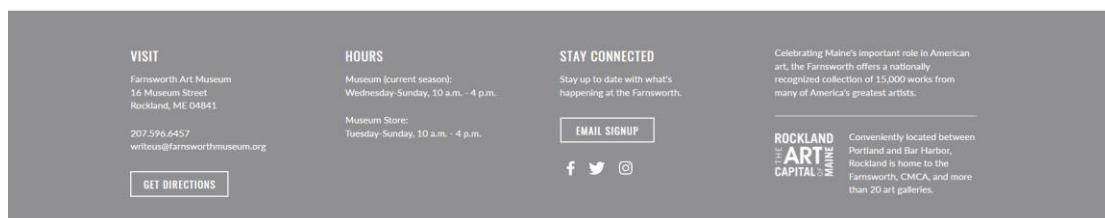

Sign up can jump to the sign page

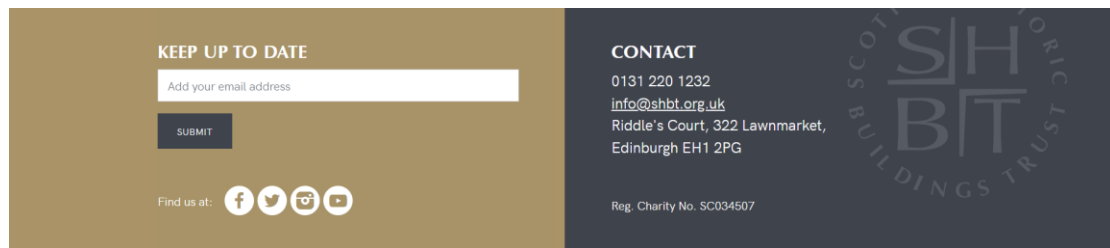

Footer:

Share with friends

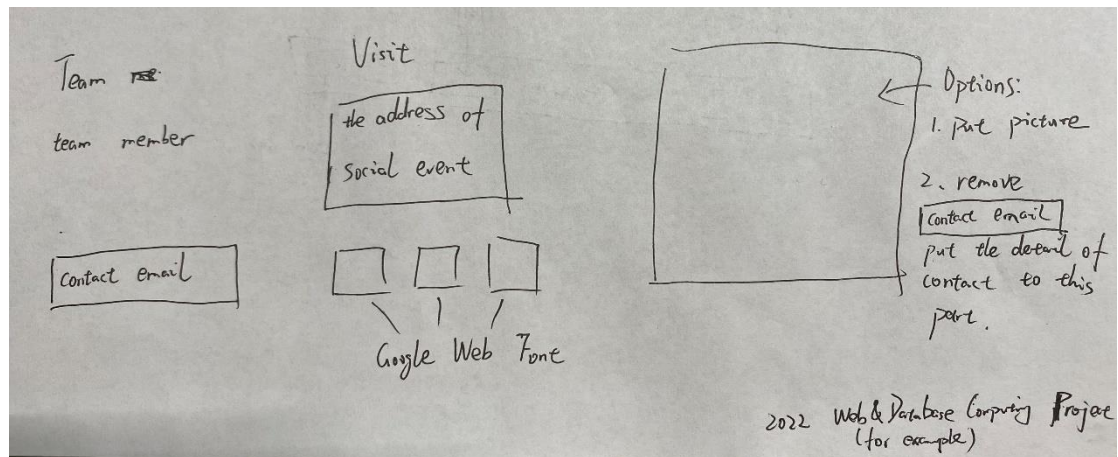

On the footer, Google Web Font could be involved. Above picture is the example for this.

These footers example can be learned from.

The drawing picture is the basic design for project.
